25X1

1. A Soviet radar station has been built directly north of Rehbergort (sic) on Wittow peninsula. The station is located about 50 meters from the shore on top of a six to seven meter high slope. The installation is described as having a concrete foundation from which a short shaft protrudes. On this there is a smaller building on whose roof there is a rotating antenna. The antenna system consists of "two sheets of mesh, both of which are bowed (sic) and can most nearly be compared to a slightly cupped hand". At various times five or six trucks have been seen parked around the station.
2. For some time there has been a rumor going about that the Wittow peninsula was to be evacuated because of a projected rocket base. In the beginning of May, the evacuation, which is continually going on, reached a relatively advanced stage. Several villages are almost entirely evacuated. Blackenberg, among others, is entirely empty, and in Nonnevitz there is at present only one farmer left.
3. Only one hangar is left of the former airfield at Bug. The remainder have been blown up. Rumors or plans for rebuilding the field have not been heard. Last year work was underway to crush the pieces of concrete and collect the iron used for reinforcement. This was taken to Prora. The crushed concrete was taken to Glowe, while the piping (including the drain pipes) was taken to an unknown place by VP's.
4. During the autumn of 1952 a new transformer was built in Bug. Cables have not yet been laid. The old cables from Wiek to the field are still in place through Wiekier Bodden but have been cut and sealed on the coast of Bug.
